

RENEWABLE ENERGY AND ENERGY EFFICIENCY POLICY

Our Commitment

At **DLF International Movers**, we recognise that responsible energy management is a key element of environmental sustainability, climate action and the continuous improvement of our operational performance.

We therefore work to optimise energy consumption, promote the use of renewable energy sources and progressively reduce the environmental impact associated with our activities.

1. Responsible Energy Use

We promote a culture of responsible consumption aimed at using energy resources efficiently, avoiding unnecessary consumption and encouraging sustainable practices throughout our daily operations.

2. Renewable Energy

We support the gradual adoption of renewable energy sources and evaluate alternative energy solutions that can help reduce our environmental impact whenever technically and economically feasible.

3. Energy Efficiency

We continuously seek to improve the efficiency of our facilities, equipment and processes by promoting energy-saving measures, digitalisation and resource optimisation.

4. Reducing Environmental Impact

We encourage actions aimed at reducing indirect emissions associated with energy consumption, minimising resource waste and contributing to more responsible environmental management.

5. Sustainable Mobility and Innovation

We support the evaluation of more efficient mobility solutions and technologies that contribute to improved energy and environmental performance.

Innovation and continuous improvement are essential elements of our commitment to a more sustainable operating model.

6. Awareness and Participation

We promote training, communication and awareness initiatives related to energy efficiency, sustainability and environmental best practices.

We believe that employee participation is essential to achieving our environmental and energy objectives.

7. Monitoring and Continuous Improvement

We regularly monitor energy consumption, initiatives and objectives to identify opportunities for improvement and strengthen our environmental performance.

Continuous improvement is a fundamental principle of our sustainability strategy.

8. Our Objective

To progressively reduce the energy impact of our activities, encourage efficient resource use and advance towards a more sustainable, resilient and ESG-aligned operating model.
